qubik.co.nz

The image shows a large green cylindrical water tank with a Qubik Water Chiller system installed. The system includes a grey outdoor condenser unit with a black fan, a smaller grey indoor unit, and a network of stainless steel pipes connecting them to the tank. A white vertical pipe and a blue-handled valve are also visible on the tank's side.

Qubik Water Chiller

- Ability to snap chill milk to 10°C within 3 minutes of leaving the cow.
- Built in heat recovery producing hot water up to 60°C at 3 litres per minute.
- Designed in New Zealand for New Zealand conditions.
- Independent from your vat refrigeration system giving peace of mind.
- Can use off peak power outside milking time to chill water.
